Summary

I build automation that takes over repetitive office work: moving data between portals, sheets and inboxes, running multi-step web workflows, and processing files and GIS data. I currently build automation and internal tools at Pointmark Consultants in Jaipur, and before that automated GIS production at Alpha Geo Solutions. In each job I started in a non-technical role and moved into automation after learning how the work was actually done.

Skills

- **Languages & Libraries:** Python (Pandas, Openpyxl), Flask, REST APIs, SQLite, JavaScript, Git
- **Agents & APIs:** Agent workflows, API integration (Claude, Gemini, AWS Bedrock), local models, OCR
- **Automation:** Web portal and form automation, Chrome extensions, Excel automation, email automation, bulk file processing, dashboards
- **GIS:** QGIS, ArcGIS, georeferencing, digitization, spatial QC

Experience

Pointmark Consultants Pvt. Ltd. | Automation Developer (R&D)

May 2026 - Present

- Work on the R&D side and build most of the firm's automation and internal tools.
- Set up agent workflows with API integration: large jobs split into packets across parallel agents, each working from a written brief with hard rules and its own checks before handing back.
- Also built invoice automation, a digital-signing queue for the office USB token, and portal integration scripts for bulk case uploads.

Alpha Geo Solutions | GIS Executive (Automation Lead)

Apr 2025 - May 2026

- Joined without knowing ArcGIS or QGIS and learned both in the first month.
- Automated around 70% of the project work in Python, including pulling data from Excel, finishing layers, georeferencing scanned maps and reading the points written on them.
- Handled QC for SVAMITVA Map2 and Bindu, georeferenced 1,000+ map sheets and trained 8 new people.

Prakhar Software Solutions Pvt. Ltd. | Data Entry Operator (Intern)

Mar 2024 - Mar 2025

- Got a project to arrange 2-3 lakh folders according to an Excel sheet, planned as six months of manual work. Wrote a Python script for it instead and finished the whole job in under two weeks.

Projects

Screenshots and details of each: techshipz.github.io

- **Portal Entry Runner (Python, SQLite):** Takes cases through a web portal's full 8-step workflow from one spreadsheet. Replays the browser's own requests, paced and resumable; 37 tests run against a mock portal.
- **Land Rate Lookup (Python, SQLite, GIS):** The first tool in the valuation industry to give an up-to-date DLC rate straight from a coordinate, with land use and a master-plan map image (63,775 Rajasthan rates).
- **Portal Auto-fill (Chrome extension, JavaScript):** Fills 60 to 380 fields per case on 8 lender portals from a finished Excel file.
- **Case Analytics Dashboard (SQLite, Chart.js):** 36,000 case records turned into client trends, alerts and a month-end forecast.
- **Map Image Makers (Python, Pillow, KML):** Coordinate in, ready-to-use map out: a plan-map crop or a satellite view with the same pin, legend and scale bar.
- **Auction Map (Python, Flask, Leaflet):** Scrapes three auction sites daily, pins 1,266 properties on a map and scores each against its district median.

Education

Bachelor of Computer Applications (BCA), Online

2026 - 2029

Manipal University Jaipur, 1st year

B.Sc.-B.Ed. (Integrated), Mathematics & Physics

2021 - 2025

University of Rajasthan, Jaipur

Class 12, Science (PCM), 82.8%

2021

RBSE, Jaipur

Certification: Automation & Python, IIT Jodhpur (2026) **Languages:** Hindi, English, Rajasthani
